

What shall we design

to hold

YOUR

data?

Working with Orchard for more than 7 years, I have found Dave and his team to be responsive and flexible in delivering a variety of custom database solutions to meet ICM's growing needs

Patrick Diamond

Managing Director, ICM Direct

Bespoke Software Development

We understand the value of data in modern business: the importance of security, accuracy and reliability. Orchard's experienced programming team offers bespoke database solutions large and small to deliver exactly what you need, and fast.

Utilising the latest modular programming languages, we specialise in presenting data quickly and intuitively on screen, drilling into detail and history as necessary, and generating detailed reports when instant electronic viewing just isn't enough. Our systems can handle simultaneous access by as many users as you care to try, and importantly our solutions are scalable with your needs, growing as you do.

With user privileges & security, comprehensive search functions, complete data manipulation, analytical summaries and easy navigation being common among

our systems, we can write the solution for you.

You may have data already in other systems or files. If so, we can import or synchronise with almost any other database or filing system to get the data right.

Our ownership policy means no seat charges - you commission the software, you own the rights to it. That means that you are free to install it as many times as you need as you expand. Orchard has an enviable reputation for delivering reliable and intuitive data solutions, but importantly, our customers like what we do and how we do it.

Companies large and small depend on our systems, so what can we do for you?

Seamless Integration

How often have you been sold a product that has features you just don't need, but misses that one thing you can't live without? One of the key benefits of commissioning a bespoke solution is that you get what you need, not what someone else needs.

Using common database tools like Microsoft Access, SQL Server, Visual Basic .Net and ODBC connectivity, you can be sure that your solutions are understood by your other IT partners as well. No smoke and mirrors here.

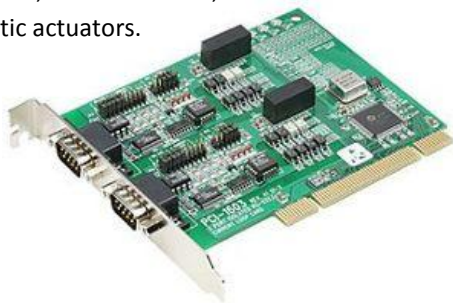

Orchard solutions work around your processes and existing systems, whether you want to keep that business-critical Excel sheet, or simply do things the way you've always done them to minimise change. We regularly integrate with:

- MS Access and SQL server databases
- MS Excel and MS Word
- Windows registry, files and folders
- MS Outlook

Real World Communication

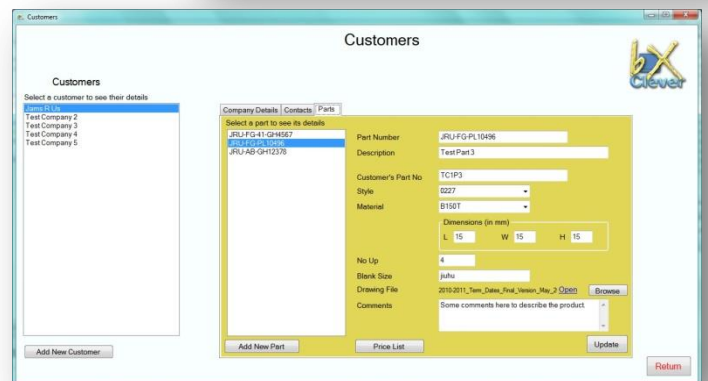

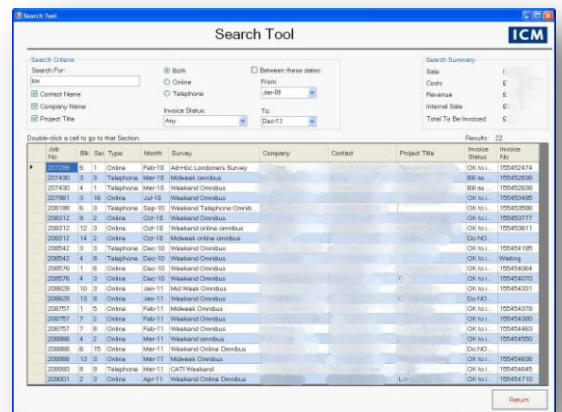

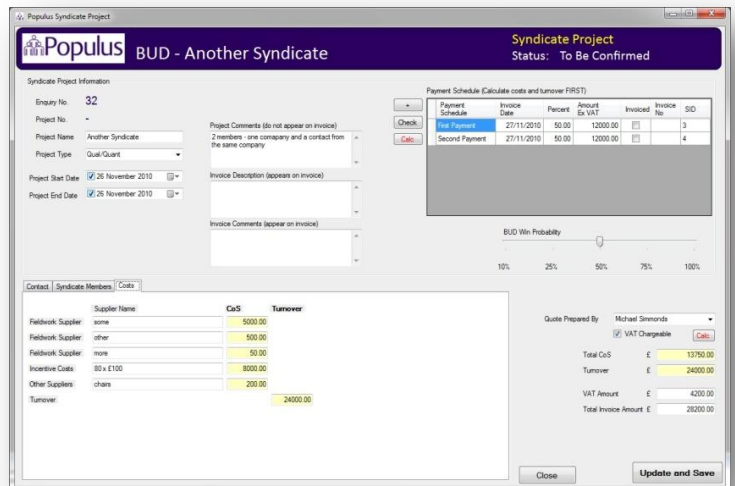

Where computers need to communicate 'outside the box' literally, Orchard specialises in linking electronic data systems with hardware communication ports (COM, Parallel, USB, Firewire) and third party software and hardware. Suddenly opening up the realm of computer tooling for many industries, we can measure and capture external signals and sensor data in realtime - storing raw data or generating charts as needed.

We also specialise in the generation of signals and voltages outside of the software too, whether communicating with barcode printers & scanners, touch screens, PLC controllers or pneumatic actuators.

“Whilst Orchard have proved to be a very professional team in every aspect, they are also a very friendly, honest and approachable firm.”
Dawn Addinall
IT Manager, Davies & Partners Solicitors
